chapter 1

GENERAL SERVICE INFORMATION

The information in this book was prepared for the Compaq Deskpro 2000 Series of Personal Computers with MMX technologies and later models as well as Compaq Deskpro Workstations, Compaq Professional Workstations, Compaq Armada Notebooks, and Compaq Prosignia Notebooks.

⚠️ Not all features are available on all Compaq products.

Troubleshooting Procedures

The flowcharts listed in Chapters 2 and 3 use the building-block concept, where flowchart 1 is the first flowchart to which you should refer. If, during the debug process, you find yourself in a bind, refer back to flowchart 1 to determine which potential problems you can rule out.

Tools Required - Desktop Computers and Workstations

- Torx T-15 and flat-blade screwdrivers
- Loopback plugs
- Write-protected bootable diskette
- Anti-static wrist strap

Tools Required - Notebooks

- Magnetic flat-blade screwdriver, Torx T-8, and T-10 screwdrivers
- 3/16-inch and 7-mm hex sockets or nut drivers
- Security wrench
- Loopback plugs
- Write-protected bootable diskette
- Anti-static wrist strap

Protecting Yourself and the Computer

- Turn the computer off before disconnecting or installing any cables.
- When the computer is connected to an AC power source there is always voltage applied to the system board. You must disconnect the power cord from the power source before opening the computer to prevent system board or component damage.
- For personal safety and to ensure that the computer does not overheat, Compaq recommends that you install the computer cover or access panel before turning on the computer.
■ The screws used in the computer are of different thread sizes and lengths; using the wrong screw in an application may damage the unit.
■ All data stored on a hard drive is lost when the drive is formatted.

Clearing CMOS

🔗 This procedure does not apply to portable computers.
1. Turn off the computer and any peripheral devices that are connected to it.
2. Disconnect the power cord from the electrical outlet and then from the computer.

⚠️ CAUTION: The cooling fan is off only when the computer is turned off and the power cable has been disconnected. The cooling fan is always on in all other instances, such as when the computer is “On,” in “Standby,” or “Suspend” mode.

⚠️ CAUTION: When the computer is connected to an AC power source there is always voltage applied to the system board. You must disconnect the power cord from the power source before opening the computer to prevent system board or component damage.

3. Remove the computer cover.
4. Reset the computer by one of the following methods depending on the model.
   ■ If the system board has a CMOS reset button, press the button and then release it to reset the CMOS.
   ■ If the system board uses jumpers, remove the E50 jumper from pins 1 and 2 for 60 seconds; then replace the jumper.

Customer Responsibilities

Check the service contract and verify that the customer has taken care of these items:
■ Installing the operating system.
■ Providing and running all virus check programs.
■ Running Diagnostics on the hard drive.
■ Reloading the operating system as required.
■ Copying over the operating system files as required.
■ Reformatting the hard drive as required.
POST Power-On Sequence

When a Compaq Personal Computer or workstation is turned on, the computer reads its first instructions from memory. It finds the instructions from the power-on restart vector addressed in ROM and begins executing those instructions. The instructions begin with a series of ROM-resident diagnostic tests called the Power-On Self-Test (POST) to determine if the computer is operational and ready to accept an operating system. The normal checking procedure for POST includes:

1. BIOS memory is tested and initialized (the first 128K of RAM is not displayed). If the system does not pass the first memory check, an immediate error message is displayed and the initialization process stops. The cause of a failure at this stage might be a problem with the ROM, the system board, the CPU, or memory.

2. The system board and bus devices are quick-tested to determine if the interrupt controllers, DMA controllers, keyboard controller, video display controller, interval timers, diskette drive controller, serial and parallel port controller, and fixed disk controller are all properly installed and are functioning properly.

3. The remaining memory is tested and the count displayed on the monitor only when starting the machine from the off mode. You should verify that the memory displayed corresponds with the memory installed in the computer.

4. The keyboard, drives, and their controllers are initialized and tested. Test results are shown via the LEDs on the keyboard and computer case.

5. CMOS memory is checked for configuration, time, and date. If the CMOS memory parameters do not match the actual system configuration, a "162-System Options" error or a "System CMOS" error will be displayed with instructions for restarting the computer.

6. The speaker will sound two short beeps or will display the Compaq splash screen when the POST has been successfully completed. Refer to the POST error messages when error messages are displayed on the screen or when beep patterns are sounded.

Compaq Drive Protection System

The Compaq Drive Protection System (DPS) is a diagnostic tool built into the hard drives installed in select Compaq Deskpro computers and workstations. DPS is designed to help diagnose problems that might result in unwarranted hard drive replacement.

When Compaq Deskpro Computers and workstations are built, each installed hard drive is tested using DPS and a permanent record of key information is written onto the drive. Each time DPS is run, test results are written to the hard drive. This information may be used to help diagnose the hard drive and the computer system.

Running DPS will not affect any programs or data stored on the hard drive. The test resides in the hard drive firmware and can be executed even if the computer will not boot to an operating system. The time required to execute the test depends on the manufacturer and size of the hard drive; in most cases, the test will take approximately 2 minutes per gigabyte.

DPS should be used when you suspect a hard drive problem. If the computer reports a SMART Hard Drive Detect Imminent Failure message, there is no need to run DPS; instead, back up the information on the hard drive and replace the hard drive.
**Accessing DPS Through Compaq Diagnostics for Windows**

To access DPS through Compaq Diagnostics for Windows, perform the following steps:

1. Turn on the computer and select My Computer→Control Panel→Compaq Diagnostics.
   A choice of five possible headings appears in the Diagnostics screen: Overview, Test, Status, Log, and Error.

2. Select Test→Type of Test
   A choice of three tests appear: Quick Test, Complete Test, and Custom Test.

3. Select Custom Test.
   A choice of two test modes is offered: Interactive Mode and Unattended Mode.

4. Select Interactive Test→Storage→Hard Drives.

5. Select the specific drive(s) to be tested→Drive Protection System Test→Begin Testing.

When the test has been completed, one of three messages will be displayed for each of the drives tested:
- Test Succeeded. Completion Code 0.
- Test Aborted. Completion Code 1 or 2.

If the test failed, the completion code should be recorded for help in diagnosing the computer problem.

**Compaq Configuration Record Utility**

Compaq Configuration Record Utility is an online information-gathering tool similar to other Compaq management tools that run on computers. It gathers critical hardware and software information from various sources to give a complete view of the computer. Configuration Record Utility delivers comprehensive configuration capture, provides a means for automatically identifying and comparing configuration changes, and has the ability to maintain a computer configuration history. The information can be saved as a history of multiple sessions.

This utility was developed to allow resolution of problems without taking the computer off-line and to assist in maximizing computer availability. The information obtained by the utility is useful in troubleshooting computer problems, and streamlines the service process by enabling quick and easy identification of computer configurations, which is the first step in resolving service cases.

The Compaq Configuration Record Utility is accessed via an icon in the Control Panel. When running the utility, information is automatically gathered on such items as the operating system version number, operating system parameters, and the operating system startup files. The utility then combines this information with information on the hardware configuration to deliver a comprehensive view of the computer.
chapter 2

TROUBLESHOOTING FLOWCHARTS FOR DESKTOP COMPUTERS

1. Initial Troubleshooting, 2-2
2. No Power, Part 1, 2-3
3. No Power, Part 2, 2-4
5. No Video, Part 1, 2-6
6. No Video, Part 2, 2-7
7. No Video, Part 3, 2-8
8. Error Messages, Part 1, 2-9
9. Error Messages, Part 2, 2-10
10. Error Messages, Part 3, 2-11
11. No O/S Loading, 2-12
12. No O/S Loading from Hard Drive, Part 1, 2-13
13. No O/S Loading from Hard Drive, Part 2, 2-14
14. No O/S Loading from Hard Drive, Part 3, 2-15
15. No O/S Loading from Diskette Drive, 2-16
16. No O/S Loading from CD-ROM Drive, 2-17
17. No O/S Loading from Network, 2-18
18. Non-Functioning Device, 2-19
1. Initial Troubleshooting

Begin Troubleshooting

115/230V set right?

- Y: Go to Page 2-9, Error Messages
- N: Set voltage to 115V or 230V as required

Is there power?

- Y: Go to Page 2-6, No Video
- N: Go to Page 2-3, No Power

Is there video?

- Y: Go to Page 2-9, Error Messages
- N: Go to Page 2-6, No Video

Beeps, LEDs, or error messages?

- Y: Go to Page 2-9, Error Messages
- N: Go to Page 2-6, No Video

Is the O/S loading?

- Y: Go to Page 2-12, No O/S Loading
- N: Go to Page 2-3, No Power

All drives working?

- Y: Go to Page 2-19, Non-Functioning Device
- N: Go to Page 2-3, No Power

New options or software added?

- Y: Run Compaq Configuration Utility, see Chapter 1
- N: Go to Page 2-6, No Video

End
2. No Power, Part 1

**No Power** (Power LED is off)

- **Power cord connected?**
  - **Y**
    - **Using power strip or UPS?**
      - **Y**
        - Ensure power strip or UPS is turned on.
      - **N**
        - **Active outlet?**
          - **Y**
            - Turn off power, disconnect power cord, and open the computer.
          - **N**
            - **Turn computer off. Plug power cord into different active wall outlet**

- **N**
  - **Turn computer off. Plug power cord into computer and power outlet.**

**Caution:** Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

Go to Page 2-4, **No Power, Part 2**

**Quick Troubleshooting Guide** 2-3
3. No Power, Part 2

Caution: Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

Continued from Page 2-3, No Power, Part 1

1. Press power button on.
2. Check for fan rotation.
3. Press power button off.

Does fan spin?

Y

No Power, Part 3

N

System board have 5V Aux LED?

Y

Plug power connector into system board.

N

Plug in power cord.

Power supply connected to system board?

Y

Replace power supply.

N

5V Aux LED on?

Y

Replace power supply.

N

Does fan spin?

1. Add drives back one-at-a-time to find faulty drive.
2. Add cards back one-at-a-time to find faulty card.

Power on?

Y

Done

N

1. Unplug power to all drives.
2. Remove all installed cards.
3. Press power button on.

Caution: Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

Go to Page 2-5, No Power, Part 3
4. No Power, Part 3

Continued from page 2-4, No Power, Part 2

Drive power and data cables connected?

Y

Loose or damaged components?

Y

Reseat loose components and replace damaged items in the computer.

N

Reinstall cover and restart computer.

N

Reseat drive power and data cable connectors.

Caution: Power is continuous to the system board and the power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

Power LED on?

Y

Replace system board.

N

Replace power switch.

N

Done

Y

Done
5. No Video, Part 1

**Caution:** Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

- **No video**
  - Beeps or flashing CPU or keyboard lights?
    - Y: Go to Page 2-9, *Error Messages, Part 1*
    - N: Monitor LED on?
      - Y: LED color? (note 1)
        - Green: Contrast and brightness turned up?
          - N: Turn contrast and brightness up.
          - Y: Go to Page 2-7, *No Video, Part 2*
        - Amber: Video adapter connected? (note 2)
          - Y: Go to Page 2-7, *No Video, Part 2*
          - N: Plug in, turn on, and return to Page 2-2, *Initial Troubleshooting.*
      - N: Monitor plugged in and turned on?
        - Y: Reconnect monitor (note 3).
        - N: Plug in and turn on monitor, then return to Page 2-2, *Initial Troubleshooting.*

**Notes:**
1. Older monitors do not support the amber LED.
2. If more than one adapter is installed, monitor must be connected to primary controller.
3. Turn off and unplug computer before reconnecting cables.
6. No Video, Part 2

Continued from Page 2-6, No Video, Part 1

Turn off power, disconnect power cord, and open the computer.

Reseat processor, riser board, video card, and memory, then clear CMOS.

Replace cover and power cord, then restart computer.

Video OK, computer starts?

Same symptoms?

Message “System option not set”?

Caution: Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

Notes:
1. System boards without a piezo speaker, or chassis without an internal speaker require an external speaker.
2. Some power supplies require a load greater than the system board alone to function properly. When disconnecting drives, disconnect the data cables but leave the power cables attached.
3. Remove auxiliary video card if integrated video.
4. Remove cache module on Deskpro 2000 models (if installed).

F1 “System option not set” routine

Go to Page 2-8, No Video, Part 3
7. No Video, Part 3

Caution: Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

Restart computer.

See codes or flashing lights or hear beeps?

Turn off computer and disconnect power. Replace components in system one at a time starting with hard drive. Test system after each replacement for video or beeps.

Integrated video?

Replace system board.

Replace video card.

Video OK?

Done
8. Error Messages, Part 1

Beeps, CPU or Keyboard Lights, or POST error messages.

**Caution:** Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

- **Power LED has no color showing.** Computer is off.
- **Power LED glows green.** Computer is on.
- **Power LED blinks green 1x/second.** Normal suspend mode.
- **Power LED glows red.** CPU not installed/fetching code.
- **Power LED blinks red 4x/second.** CPU thermal shutdown.
- **Power LED blinks red 1x/two or more seconds.** Power supply crow bar.
- **Power and hard drive LEDs glow red.** Riser board not seated.
- **Num Lock LED flashing green.** Memory error.
- **Caps Lock LED flashing green.** No video.
- **Scroll Lock LED flashing green.** System board failure, prior to video.
- **Audible. 1L 3S.** System ROM is bad; system is running in FailSafe Boot Block Mode.
- **Audible. 2S.** Power-ON successful.

Continued on Page 2-10, **Error Messages, Part 2.**

**Notes:** Short (S) and long (L) beeps will only be heard if the system has a speaker. LEDs will only function on PS/2 keyboards, not USB.
9. Error Messages, Part 2

Continued from Page 2-9, Error Messages, Part 1

Caution: Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

1S 2L. Num Lock blinking. System memory not present or incompatible.
Unplug, open computer, and check memory modules. Ensure memory modules are correct type and that they match in size and speed.

1L 2S. Cap Lock blinking. Video controller not present or incorrectly initialized.
Ensure monitor is plugged in. Unplug, open computer, and check video card. Reseat card and ensure it is in the proper expansion slot.

1L 3S. All keyboard LEDs blinking. ROM Failure.
Create ROMPaq diskette and reload ROM. Download ROMPaq from Compaq website at www.compaq.com.

2L 1S. Scroll Lock blinking. System HW failure prior to video.
Unplug, open computer, and check for physical damage. Ensure all cables and cards are seated. Look for burn marks or smoke.

No beeps. HD and Power LED blinking. Riser not detected.
Unplug, open computer, and check and reseat riser board.

Continued on Page 2-11, Error Messages, Part 3.

Notes: Short (S) and long (L) beeps will only be heard if the system has a speaker.
LEDs will only function on PS/2 keyboards, not USB.
10. Error Messages, Part 3

Caution: Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.

Error 162, 2S Beeps. System Option not set. Select F1. If error occurs after reboot, unplug and open computer and check CMOS jumper setting.

Error 163. Time & Date Not Set. Set time and date in F10 or boot to O/S and set time and date. If error occurs after reboot, unplug and open computer, then check CMOS setting.

Error 2xx. Memory Error. See Appendix B for specific definitions. Unplug, open computer, and reseat memory modules. Ensure modules are correct type and that they match in size and speed.

Error 30x. Keyboard Error. See Appendix B for specific definitions. Do not type on keyboard before POST. Ensure keyboard connected to proper connector.

Error 6xx. Floppy Error. See Appendix B for specific definitions. Unplug, open computer, check diskette drive, and check and reseat power and data cables.

Error 91x. Misc. Connection Error. See Appendix B for specific definitions. Unplug, open computer, and check hood lock coil, thermal sensor pigtail, and riser for good connection.

Error 178x. Fixed Disk Error. See Appendix B for specific definitions. Unplug, open computer, check hard drive, and check and reseat power and data cables.

Error 1800. Thermal Alert. System overheating. Let computer cool off. Ensure processor has heatsink installed and that speed setting on system board is correct. Remove obstructions to air vents.

All other POST error messages - refer to Appendix B for definitions and solutions.

Notes: Short (S) and long (L) beeps will only be heard if the system has a speaker.
LEDs will only function on PS/2 keyboards, not USB.

x = Numbers 1 - 9
11. No O/S Loading

- O/S not loading from:
  - CD-ROM drive, go to Page 2-17
  - Diskette drive, go to Page 2-16
  - Hard drive, go to Page 2-13
  - Network, go to Page 2-18

**Factory recommended booting priority**
1. CD-ROM drive

Booting from another device?

N

N

Go to Page 2-19, Non-Functioning Device

Y

Booting order correct?

Y

Clear CMOS

N

Correct boot order. (see notes)

Go to Page 2-19, Non-Functioning Device
17. No O/S Loading from Network

No O/S loading from network

F12 prompt during POST?

Y

Select F12 on prompt?

Y

WOL or Network cable attached?

Y

Network jack functional?

Y

Reboot computer. Select F12 when prompted.

N

Attach network or WOL cable.

N

Connect to working network jack.

N

Compaq supported NIC?

Y

Boots from another device?

Y

Boot order correct?

Y

Correct boot order. (see notes)

N

Go to Page 2-19, Non-Functioning Device

N

N

Turn off power, disconnect power cord, open computer, and install Compaq-compatible NIC.

Go to Page 2-19, Non-Functioning Device

Boots from network?

Y

Done

N

To C

Notes:

Factory Recommended Booting Sequence

1. CD-ROM drive
2. Diskette drive
3. Hard drive
4. Network
18. Non-Functioning Device

Non-functioning device.

Turn off power, disconnect power cord, and open the computer.

Unplug the power and data cable from the non-functioning device. Inspect cables and plugs for bent or broken pins or other damage. For a NIC or SCSI controller, remove the expansion card and inspect leads.

Any physical damage?

Y

Fix or replace broken item.

N

Clear CMOS

Reattach drive. Close computer, plug in power, and reboot.

Drive boots properly?

Y

Done

N

Hard drive or CD-ROM drive
- RUN DPS HARD DRIVE TEST. (hard drive only)
- Check IDE drive jumper settings for Cable Select and Primary/Secondary status.
- Check SCSI drive ID and termination.
- Correct any conflicts.

NIC
- Possible bad NIC, replace card. If integrated NIC, replace system board.

Diskette drive
- Possible bad diskette drive. Replace drive.

Drive boots properly?

Y

Go to Page 2-12, No O/S Loading.

N

Done

Caution: Power is continuous to the system board and power supply even when the power switch is turned off. To prevent damage to the unit, disconnect the power cord from the power source or the unit before beginning disassembly procedures.
chapter 3

TROUBLESHOOTING FLOWCHARTS FOR PORTABLE COMPUTERS

1. Initial Troubleshooting, 3-2
2. No Power, Part 1, 3-3
3. No Power, Part 2, 3-4
4. No Power, Part 3, 3-5
5. No Power, Part 4, 3-6
6. No Video, Part 1, 3-7
7. No Video, Part 2, 3-8
8. Non-Functioning Docking Station, 3-9
9. No O/S Loading, 3-10
10. No O/S Loading from Hard Drive, Part 1, 3-11
11. No O/S Loading from Hard Drive, Part 2, 3-12
12. No O/S Loading from Hard Drive, Part 3, 3-13
13. No O/S Loading from Diskette Drive, 3-14
14. No O/S Loading from CD-ROM or DVD-ROM Drive, 3-15
15. No Audio, Part 1, 3-16
16. No Audio, Part 2, 3-17
17. Non-Functioning Device, 3-18
18. Non-Functioning Pointing Device or Keyboard, 3-19
19. No Network or Modem Connection, 3-20
1. Initial Troubleshooting

- **Begin Troubleshooting**

  - Is there power?  
    - **Y**: Go to Page 3-16, *No Audio*  
    - **N**: Go to Page 3-3, *No Power*

  - Beeps, LEDs, or error messages?  
    - **N**: Go to Page B-1, *Error Messages*

  - Is there video? (no boot)  
    - **Y**: Go to Page 3-7, *No Video*

  - Is the O/S loading?  
    - **Y**: Go to Page 3-10, *No O/S Loading*

  - Is there sound?  
    - **Y**: Go to Page 3-16, *No Audio*

  - All drives working?  
    - **N**: Go to Page 3-18, *Non-Functioning Device*

  - Keyboard/Mouse working?  
    - **N**: Go to Page 3-19, *Keyboard/Mouse*

  - Connecting to network or modem?  
    - **N**: Go to page 3-20, *Network or Modem Connection*
2. No Power, Part 1

No Power
(Power LED is off)

Remove from
 docking station
if applicable.

Power up
on battery
power?

*Reset
Power.

Power up
on battery
power?

*Reset
Power.

Power up
on AC
power?

*Reset
Power.

Power up
on AC
power?

Power up
in docking
station?

*Notes:
1. On some models, there is a separate reset button.
2. On some models, the computer may be reset by using the Standby Switch and either the Lid Switch or the Main Power Switch.

1. Reseat power cables in docking station and at the AC outlet.
2. Ensure AC power source is active.
3. Ensure power strip is working.

Done

Go to page 3-4,
No Power, Part 2

Go to page 3-5,
No Power, Part 3

Go to Page 3-9,
Non-Functioning
Docking Station
3. No Power, Part 2

Continued from page 3-3, No Power, Part 1

N

Visually check for debris in battery socket and clean if required.

Power on?

Y

Done

N

Check battery by recharging, moving it to another PC, or replacing it.

Power on?

N

Replace power supply (if applicable).

Y

Done

Power on?

N

Go to Page 3-5, No Power, Part 3

Y

Done
4. No Power, Part 3

Continued from page 3-4, No Power, Part 2

Plug directly into AC outlet.

Power LED on?

Y → Done

N → Reseat AC adapter in PC and at power source.

Power on?

Y → Done

N → Power outlet active?

Y → Try different outlet.

N → Replace power cord.

Power on?

Y → Done

N → Internal or external AC adapter?

Y → Replace external AC adapter.

N → Go to page 3-6, No Power, Part 4

Power on?

Y → Done

N → Done.
5. No Power, Part 4

Continued from Page 3-5, No Power, Part 3

Open Computer

Loose or damaged parts? Y
Reseat loose components and boards and replace damaged items.

N
Close computer and retest.

Power on? Y
Done

N
Replace these items. Check computer operation after each replacement:
1. Internal DC-DC Converter*
2. Internal AC Adapter
3. Processor board (if applicable)*
4. System board*

* Replace these items as a set to prevent shorting out among the components.
6. No Video, Part 1

No Video

- Standalone or Docking Station?
  - Standalone
  - Internal or external display?
    - Internal
      - Adjust brightness.
      - Video OK?
        - Y: Done
        - N: Check for bent pins on cable and for monitor connection.
    - External
      - Adjust brightness.

- Video OK?
  - Y: Done
  - N: Replace one at a time. Test after each item:
    1. Cable between PC and internal monitor (if applicable)
    2. Inverter board (if applicable)
    3. Display LCD
    4. System board

*Note: To change from internal to external display, use Fn + F4 Key combination.

Replace system board.

Y: Replace another monitor.

Y: Internal and external video OK?

Done

Done

Go to page 3-8, No Video, Part 2

Try another monitor.
7. No Video, Part 2

Continued from Page 3-7, No Video, Part 1

Remove PC from docking station.

Adjust internal monitor brightness.

Video OK?

Y

Check for PC properly seated in docking station, bent pins on cable, and for monitor connection.

Video OK?

Y

Done

N

Adjust external monitor brightness.

Check brightness of external monitor.

Video OK?

Y

Done

N

Go to page 3-7, No Video Part 1.

Try another external monitor.

Internal and external video OK?

Y

Done

N

Go to page 3-9, Non-Functioning Docking Station.
8. Non-Functioning Docking Station

- Reseat power cord in docking station and power outlet.
- Check voltage setting on docking station.
- Reseat monitor cable connector at docking station.
- Docking station operating?
  - Y: Done
  - N: Remove PC, reseat all internal parts and replace any damaged items in docking station.
- Reinstall PC into docking station.
- Docking station operating?
  - Y: Done
  - N: Replace these items one at a time. Check computer operation after each replacement.
    1. Power supply
    2. I/O board
    3. Backplane board
    4. Switch box
    5. Docking motor mechanism

Done

Y

N
9. No O/S Loading

O/S not loading from:

- Hard drive, go to Page 3-11
- Diskette drive, go to Page 3-14
- CD-ROM drive, go to Page 3-15
- Network, go to Page 3-20

**NOTE:** Before beginning, always check drive jumpers, cable connections, cable ends, and drives for bent or damaged pins.
10. No O/S Loading from Hard Drive, Part 1

O/S not loading from hard drive

Non-System Disk Message? Y Go to Page 3-12, No O/S Loading from Hard Drive, Part 2

N Reseat external hard drive.

O/S loading? Y Done

N Go to Page 3-14, Non O/S Loading from Diskette Drive

Boot from CD? Y

Check F10 Setup for correct booting order.

N Boot from hard drive?

Y Done

N Boot from diskette?

Y Change boot priority through Computer Setup and reboot.

N Go to Page 3-18, Non-Functioning Device

NOTE: Before beginning, always check drive jumpers, cable connections, cable ends and drives for bent or damaged pins.
11. No O/S Loading from Hard Drive, Part 2

Continued from Page 3-11, No O/S Loading from Hard Drive, Part 1

CD or diskette in drive?

Y

Remove diskette and reboot.

N

Boot from hard drive?

Y

Done

N

Hard drive partition?

Y

Create partition, then format hard drive to bootable C:\ prompt.

N

Hard drive formatted?

Y

Format hard drive and bring to a bootable C:\ prompt.

N

Load O/S using Restore CD if applicable. (see note)

Access hard drive?

Y

Y

Computer boot?

N

N

Go to Page 3-13, No O/S Loading from Hard Drive, Part 3

Y

Done

Note: Refer to the “Customer Responsibilities” section of this document and the customer service contract.
12. No O/S Loading from Hard Drive, Part 3

Continued from Page 3-12, No O/S Loading from Hard Drive, Part 2

- System files on hard drive?
  - Yes
  - Run SCANDISK, check for bad sectors.
  - No
  - Can bad sectors be fixed?
    - Yes
    - Fix bad sectors.
    - No
    - Replace hard drive.

- Install O/S and reboot. (see note)

- Virus on hard drive?
  - Yes
  - Clean virus. (see note)
  - No

- O/S loading from hard drive?
  - Yes
  - Done
  - No

- F10 diagnostics on diskette?
  - Yes
  - Replace hard drive.
  - No
  - Run diagnostics and follow recommendations.

- Boot from hard drive?
  - Yes
  - Done
  - No
  - Replace hard drive.
13. No O/S Loading from Diskette Drive

- O/S not loading from diskette drive
  - Reseat diskette drive.
  - O/S loads OK?
    - Y: Done.
    - N: Non-System Disk message?
      - Y: Bootable diskette in drive?
        - Y: Install bootable diskette and reboot computer.
        - N: Go to Page 3-18, Non-Functioning Device.
      - N: Boot from another device?
        - Y: Go to Page 3-18, Non-Functioning Device.
        - N: Diskette drive enabled in Computer Setup?
          - Y: Diskette drive boot order
            - Y: Clear CMOS.
            - N: Change boot priority using F10 Setup.
          - N: Non System Disk error?
            - Y: 1. Replace diskette drive. 2. Replace system board.
            - N: O/S loading?
              - Y: Done.
              - N: Check diskette for system files. Try different diskette.

  - N: Non-System Disk message?
    - Y: Bootable diskette in drive?
      - Y: Install bootable diskette and reboot computer.
      - N: Go to Page 3-18, Non-Functioning Device.
    - N: Boot from another device?
      - Y: Go to Page 3-18, Non-Functioning Device.
      - N: Diskette drive enabled in Computer Setup?
        - Y: Diskette drive boot order
          - Y: Clear CMOS.
          - N: Change boot priority using F10 Setup.
        - N: Non System Disk error?
          - Y: 1. Replace diskette drive. 2. Replace system board.
          - N: O/S loading?
            - Y: Done.
            - N: Check diskette for system files. Try different diskette.
14. No O/S Loading from CD-ROM or DVD-ROM Drive

No O/S Loading from CD- or DVD-ROM drive.

- Disk in drive? (Y) -> Install bootable disk.
- Bootable disk in drive? (N) -> Bootable disk in drive? (Y) -> Try another bootable disk.
- Disk in drive? (N) -> Bootable disk in drive? (N) -> Install bootable disk and reboot computer.

- Boots from CD or DVD? (Y) -> Done
- Boots from CD or DVD? (N) -> Reseat drive.

- Reseat drive.

- Boots from CD or DVD? (Y) -> Done
- Boots from CD or DVD? (N) -> Booting from another device? (Y) -> Non-Functioning Device
- Booting from another device? (N) -> Go to Page 3-18, Non-Functioning Device

- Booting order correct? (Y) -> Clear CMOS.
- Booting order correct? (N) -> Correct boot order using F10 Setup.

- Booting order correct? (N) -> Go to Page 3-18, Non-Functioning Device
15. No Audio, Part 1

No audio. → Turn up audio internally and/or externally. → Audio? → Y → Done
   N → PC in docking station? → Y → Undock
   N → Internal audio? → N → Y → Take the following actions one at a time as applicable. Check after each change.
   1. Reseat docking station audio cable.
   2. Replace audio cable.
   3. Replace speaker
   4. Replace docking station audio board.
   5. Replace backplane board.
   6. Replace I/O board.
   N → Go to Page 3-17, No Audio, Part 2

Y → Audio? → Y → Done
   N → Go to Page 3-9, Non-Functional Docking Station

Go to Page 3-17, No Audio, Part 2
16. No Audio, Part 2

Continued from Page 3-16, No Audio, Part 1

Audio driver in OS configured?

Y

Correct drivers for application?

Y

Connect to external speaker.

N

Reload audio drivers.

Load drivers and set configuration in OS.

Audio?

Y

Done

N

Replace audio board and speaker connections in PC if applicable.

Audio?

Y

1. Replace internal speaker.
2. Replace audio board if applicable.
3. Replace system board.
17. Non-Functioning Device

Non-functioning device.

Reseat device.

Unplug the non-functioning device from the unit. Inspect cables and plugs for bent or broken pins or other damage.

Any physical damage? Y Fix or replace broken item.

N Clear CMOS.

Reattach device. Close computer, plug in power, and reboot.

Device boots properly? Y Done

N Hard drive or CD-ROM drive Possible bad hard drive. Replace drive.

NIC Possible bad NIC. Replace card. If integrated NIC, replace system board.

Diskette drive Possible bad diskette drive. Replace drive.

Go to Page 3-10, No O/S Loading.

Drive boots properly?

N Y Done
18. Non-Functioning Pointing Device or Keyboard

Pointing device or keyboard not operating properly.

Connect unit to good external keyboard or pointing device.

External device works?

Y

Reseat internal keyboard connector (if applicable).

N

Replace system board.

Y

Replace internal keyboard, cable, or pointing device.

OK?

N

Replace system board.

Y

Done

N

OK?

Y

Done
19. No Network or Modem Connection

No network/modem connection.

- Network or modem jack active?
  - Y
    - Digital line?
      - Y
        - Connect to non-digital line.
      - N
        - NIC/modem configured in OS?
          - Y
            - Disconnect all power from PC and open computer.
          - N
            - Reload drivers and reconfigure.
  - N
    - Replace jack or have jack activated.

- OK?
  - Y
    - Done
  - N
    - NIC/modem configured in OS?
      - Y
        - Replace NIC/modem if applicable.
      - N
        - Replace network/modem.

- OK?
  - Y
    - Done
  - N
    - Replace system board.
Preliinary Checklist

This section describes some simple, preliminary tests and guidelines for troubleshooting the computer without using the diagnostics.

If you encounter some minor problem with the computer or a software application, go through the following checklist for possible solutions before running any of the diagnostic utilities:

- Are the computer and monitor connected to a working electrical outlet?
- Is the computer turned on?
- Is the green power light illuminated?
- Is the monitor turned on?
- Is the green monitor light illuminated?
- Turn up the monitor brightness and contrast controls if the monitor is dim.
- Press and hold any key. If the system beeps, then the keyboard should be operating correctly.
- Check all cables for loose or incorrect connections.
- Reconfigure the computer after installing a non Plug and Play expansion board or other option, such as a diskette drive.
- Are all of the necessary device drivers installed?
- Have all printer drivers been installed for each application?
- Remove all diskettes from the diskette drives before you turn on the system.
- Are all switches set correctly?
- Is the NIC Remote Wakeup cable (featured on some models) connected between the NIC and the riser/system board?
- Are all memory sockets filled on computers using RIMMs?
- Ensure that memory module types are not mixed on the same system board. The system will not boot if RIMMs and DIMMs are mixed.
## Solving General Problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| Computer will not turn on.                          | 1. Ensure computer is properly connected to an external power source.  
|                                                      | 2. A PCI or ISA card that has been installed is defective. Remove any adapter card that was just installed.  
|                                                      | 3. Ensure that drive power, data, and power supply cables are all properly seated.  
|                                                      | 4. See “Initial Troubleshooting” Flowchart.                                                                                                                                                                        |
| Computer appears locked up and won’t turn off when   | Software control of the power button may not be functional. Press and hold the button for four seconds, then release. This invokes the hardware override for the power button. |
| the power button is pressed.                         |                                                                                                                                                                                                                  |
| Computer date and time display is incorrect.         | Reset the date and time using Control Panel. If the problem persists, the real-time clock (RTC) battery may need to be replaced.  
|                                                      | When booting from a network, the PC clock may be reset to that of the server. The PC clock may also change when using other services through the server.                                                                 |
| Computer powered off unexpectedly.                   | 1. The unit temperature was exceeded because the unit is in an exceedingly hot environment or the fan is blocked. Let the unit cool down.  
|                                                      | 2. The fan may not be functioning correctly or air vents may be blocked.  
|                                                      | 3. The unit temperature was exceeded because the computer was running with the cover or side panel removed. Replace cover or side panel, and let the computer cool down before turning power back on. |
| Insufficient power to the components.                | Ensure that both power supply cables are connected to the system board (some workstations).                                                                                                                                 |
| Computer appears to pause periodically.              | Network driver is loaded and no network connection is established. Establish a network connection, or use Computer Setup or Windows Device Manager to disable the network controller.                                       |
| Cannot remove computer cover or side panel.         | 1. Smart Lock, featured on some computers, is locked. Unlock using Computer Setup.  
|                                                      | 2. The Smart Cover FailSafe Key, a device for manually disabling the Smart Cover Lock, is available from Compaq. You’ll need the FailSafe Key in cases of forgotten password, power loss, or computer malfunction. |
| Computer does not boot up and power and hard drive   | 1. Ensure that the riser board is properly seated (if applicable).  
| LEDs are blinking.                                   | 2. See “Error Messages” Flowchart.                                                                                                                                                                               |
**Solving General Problems** Continued

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| **Computer does not boot up** and Num Lock LED is blinking; you may hear one short and two long beeps. | 1. System memory may be improperly installed or may be bad.  
2. See “Error Messages” Flowchart. |
| **The Caps Lock LED is flashing**; you may hear one long and two short beeps. | 1. The video controller is not present or is incorrectly initialized.  
2. Clear CMOS.  
3. If a video board has been added, remove and reseat it.  
4. See “No Video” Flowchart. |
| **Computer does not boot up** and the Scroll Lock LED is flashing; you may hear two long and one short beeps. | 1. System board hardware failure (prior to video). Replace system board.  
2. See “Initial Troubleshooting” Flowchart. |

⚠️ If the standard keyboard has been replaced with a Universal Serial Bus (USB) keyboard, you will hear the beep sequences mentioned above but will not see the flashing lights.

**Power Supply**

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| **Computer will not turn on.** | 1. Computer not connected to active external power source. Connect power cable to active wall plug or power strip.  
2. Power switch not connected to system board. Plug the power switch cable into the system board.  
3. Power line selector switch on rear of computer set to wrong voltage. Select the proper AC voltage (115V or 230V). |
| **Power LED blinks red once every 2 seconds.** | 1. Power supply overloaded or short detected. Unplug computer from AC power source. Unplug internal power cables from all devices and unplug PCI cards. Reconnect devices one at a time to identify the cause.  
2. Diskette drive power cable not properly connected. Ensure that all 4 pins on the drive are connected to the power cable connector.  
3. Power supply shuts down after system warms up. Thermal overload caused by bad fan. Replace power supply.  
4. Power supply will not turn on because of internal power supply fault. Replace power supply. |
| **Power supply shuts down intermittently.** | 1. Power line selector switch on rear of computer set to wrong voltage. Select the proper AC voltage (115V or 230V).  
2. Power supply will not turn on because of internal power supply fault. Replace power supply. |
**Diskette Drive**

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| Diskette drive light stays on. | 1. Diskette is damaged. In Windows 95, 98, or 2000, run ScanDisk. In Windows NT, run Error-checking.  
2. Diskette is incorrectly inserted. Remove the diskette and reinsert.  
3. Software program may be damaged. Check the program diskettes.  
4. Drive button is not pushed in. Push in drive button.  
5. Drive cable is not properly connected. Reconnect drive cable. |
| Diskette drive cannot write to a diskette. | 1. Diskette is not formatted. Format the diskette.  
2. Diskette is write-protected. Either use another diskette that is not write-protected or disable the write protection on the diskette.  
3. Writing to the wrong drive. Check the drive letter in the path statement.  
4. Not enough space is left on the diskette. Use another diskette.  
5. Diskette write control is enabled. Check the Removable Media write settings in Computer Setup. |
| Cannot format diskette. | Invalid media reported. When formatting a diskette in DOS, you may need to specify diskette capacity. For example, to format a 1.44-MB diskette, type the following command at the DOS prompt:  
```FORMAT A:/F:1440``` |
| Diskette drive cannot read a diskette. | 1. Diskette is not formatted. Format the diskette.  
2. Using the wrong diskette type for the drive type. Check the drive type and use a compatible diskette.  
3. Reading the wrong drive. Check the drive letter in the path statement.  
4. Diskette drive has been disabled by Computer Setup, Windows NT, Windows 95, 98, or 2000 utilities. Run Computer Setup and enable the diskette drive. |
| Non-system disk message. | 1. The system is trying to start from a nonsystem diskette. Remove the diskette from the drive.  
2. Diskette MBR validation enabled. Disable the MBR validation option. |
| Drive not found. | 1. Check the cables for loose connections.  
2. If a second diskette drive has been installed, follow the computer reconfiguration directions in the “Hardware Installation Problems” section.  
3. See “Non-Functioning Device” Flowchart. |
### Diskette Drive

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>A problem has occurred with a disk transaction.</td>
<td>The directory structure is bad, or there is a problem with a file. Run ScanDisk.</td>
</tr>
<tr>
<td>System has misidentified the diskette drive type.</td>
<td>If a diskette drive other than a 3.5-inch, 1.44-MB drive has been installed, ensure that the drive type is identified correctly under Computer Setup.</td>
</tr>
</tbody>
</table>

### Hard Drive

The information provided by the diagnostics tests includes: error code, system serial number, drive serial number, drive model, and drive firmware revision. Specific details of the drive failure are not included.

When you run the diagnostics, the test results are stored in a log. After completing the test, you can print this log to a local printer or save it to a file. Alternatively, before running the test, you can configure the test options to send the results to a local printer or file.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hard drive error occurs.</td>
<td>1. Hard disk has bad sectors or has failed. Use a utility to locate and block usage of bad sectors. If necessary, reformat the hard disk.</td>

<td>2. Screen save has been initiated. Press any key or move the mouse to light the screen.</td>
</tr>
<tr>
<td></td>
<td>3. The cable connections are not correct. Check the cable connection from the monitor to the computer and check the electrical outlet.</td>
</tr>
<tr>
<td></td>
<td>4. The brightness need adjusting. Adjust the brightness control.</td>
</tr>
<tr>
<td></td>
<td>5. The QuickBlank feature has been enabled through Computer Setup. Run Computer Setup to disable it.</td>
</tr>
<tr>
<td></td>
<td>6. The energy saver feature has been enabled. Press any key or click the mouse button and, if one has been set, type the password.</td>
</tr>
<tr>
<td></td>
<td>7. The RGB (Red, Green, Blue) input switch on the back of the monitor is incorrectly set. Set the monitor's input switch to 75 ohms and set sync switch to External (if applicable).</td>
</tr>
<tr>
<td></td>
<td>8. System ROM is bad and system is running in FailSafe Boot Block mode (indicated by one long beep and three short beeps). Reflash the ROM using a ROMPaq diskette.</td>
</tr>
<tr>
<td></td>
<td>9. If a fixed-sync monitor is used, be sure that the monitor can accept the same sweep rate as the resolution chosen.</td>
</tr>
<tr>
<td></td>
<td>10. See “No Video” Flowchart.</td>
</tr>
</tbody>
</table>

| Video colors are wrong.                          | 1. Either the cabling or the monitor impedance is incorrect.                                                                                     |
|                                                  | 2. Ensure that the Red, Green, and Blue BNC cables are connected to the corresponding monitor connectors.                                         |
|                                                  | 3. Be sure the monitor's RGB inputs are set to 75 ohms.                                                                                         |

| Characters are dim.                              | 1. Adjust the monitor's brightness and contrast controls.                                                                                       |
|                                                  | 2. Check that the video cable is securely connected to the video card and monitor.                                                            |
|                                                  | 3. Set the RGB switch (and sync options, if available) to 75 ohms, with the sync set to External. Refer to the documentation included with the monitor. |

| Monitor does not function properly when used with the energy saver features. | Monitor without the energy saver feature is being used with energy saver features enabled. Disable the monitor energy saver features. |

| Screen goes blank.                              | A screen blanking utility may be installed or energy saver features may be enabled. Press any key or type password.                        |

| Blurry display or requested resolution cannot be set. | If the video controller was upgraded, the correct display drivers may not be loaded. Install the correct display drivers on the diskette included in the upgrade kit. |
### Display

**Problem**
The picture is broken up; it rolls, jitters, or blinks.

**Possible Solution**
1. Ensure the monitor cable is securely connected to the computer.
2. In a two-monitor system or if another monitor is in close proximity, move the monitors apart to be sure they are not interfering with one other's magnetic field.
3. Fluorescent lights or fans may be too close to the monitor.

Monitor overheats.

**Possible Solution**
There is not enough ventilation space for proper airflow. Leave at least 3 inches (7.6 cm) of ventilation space. Be sure there is nothing on top of the monitor obstructing the air flow.

Cursor will not move using arrow keys on the numeric keypad.

**Possible Solution**
The Num Lock key is on. Press the key to turn it off. The Num Lock light should not be on when you want to use the arrow keys.

### Printer

**Problem**
Printer will not print.

**Possible Solution**
1. Printer is not turned on and online. Turn the printer on and make sure it is online.
2. Try printing using the DOS command DIR C:\ > [printer port]. If printer works, reload printer driver.
3. If the computer is on a network, you may not have made the connection to the printer. Make the proper network connections to the printer.

Printer will not turn on.

**Possible Solution**
Reconnect all cables and check the power cord and electrical outlet.

Prints garbled information.

**Possible Solution**
1. The correct printer drivers for the application are not installed. Install the correct printer driver for the application.
2. The cables may not be connected properly. Reconnect all cables.

Printer is off line.

**Possible Solution**
The printer may be out of paper. Check the paper tray and refill it if it is empty. Select online.

### SCSI

**Problem**
System with IDE and SCSI drives will not boot from SCSI hard drive.

**Possible Solution**
The IDE drive needs to be disabled. Under the Computer Setup Advanced menu, disable the primary IDE controller.

System will not boot from a SCSI drive.

**Possible Solution**
1. The SCSI drive is not configured correctly.
2. Ensure that drive cabling and jumpers are set correctly. To boot a SCSI drive, the drive ID number must be set to 0.
3. See “No O/S Loading from Hard Drive” Flowchart.
### Hardware Installation

You may need to reconfigure the computer when you add or remove hardware, such as an additional diskette drive. If you install a Plug and Play device, Windows 95 and 98 automatically recognizes the device and configures the computer. If you install a non-Plug and Play device, you must reconfigure the computer after completing installation of the new hardware. In Windows 95 and 98, select the Add New Hardware icon in the Control Panel and follow the instructions that appear on the screen. To reconfigure the computer in Windows NT Workstation 4.0 after installing new hardware, use the utility provided with the hardware.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| A new device is not automatically recognized as part of the computer system. | 1. The computer needs to be reconfigured to recognize the new device. Follow the reconfiguration instructions above. If system still does not recognize the new device, but the device is listed within Computer Setup, use Computer Setup to address any resource conflicts.  
2. When the system advised you of changes to the configuration, you did not accept them. Reboot the computer and follow the instructions for accepting the changes.  
3. A Plug and Play board may not automatically configure when added if the default configuration conflicts with other devices. Use Windows 95, 98, or 2000 Device Manager to deselect the automatic settings for the board and choose a basic configuration that doesn’t cause a resource conflict. You can also use Computer Setup to reconfigure or disable devices to resolve the resource conflict.  
4. The cables for the new external device are loose or the power cables are unplugged. Check all cables, and check that pins in the cable or connector are not bent down.  
5. The power switch for the new external device is not turned on. Turn off the computer, turn on the external device, and then turn the computer on to integrate the new device with the computer.  
6. If the drive is a secondary drive that has just been installed on the same controller as the primary drive, verify that the jumpers for both drives are set correctly. |
| Insufficient power to the components. | Ensure both power supply cables are connected to the system board (some workstations). |
| Installed third-party SCSI hard drive adapter not participating in the hard drive ordering sequence provided in F10 Setup and/or is always coming up as the boot device regardless of the predetermined sequence. | The third-party adapter is either not supporting BIOS Boot Specification or the Boot Vector option. A solution is not available. |
## CD-ROM and DVD-ROM

<table>

Some common causes and solutions for network problems are listed in the following table. These guidelines do not discuss the process of debugging network cabling.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| The Remote Wakeup feature is not functioning.| 1. The feature is not available when using an AUI network connection; use an RJ-45 network connection.  
2. Remote Wakeup is not enabled. Use the network control application to enable Remote Wakeup.  
3. Check that WOL cable is connected (if applicable). |
| Network driver does not detect network controller. | Network controller is disabled. Run Computer Setup and enable network controller. |
| Network status link light does not turn on or flashes. | 1. No active network is detected. Check cabling and network equipment for proper connection.  
2. Network connection is not set up properly. Use the network control application to verify that the device is working properly.  
3. System is configured for AUI connection; link LED does not apply to AUI connections.  
4. Network driver is not properly loaded. Reinstall network drivers.  
5. System cannot autosense the network. Disable autosensing capabilities and force the system into the correct operating mode. |
| Diagnostics reports a failure. | 1. The cable is not securely connected or is attached incorrectly. Ensure that the cable is securely attached to the network connector and that the other end of the cable is securely attached to the correct device.  
2. There is a problem with the cable or a device at the other end of the cable. Ensure that the cable and device at the other end are operating correctly.  
3. The network controller is defective. Replace the controller or the system board.  
| Diagnostics passes, but the computer does not communicate with the network. | 1. Network drivers are not loaded, or driver parameters do not match current configuration. Make sure the network drivers are loaded and that the driver parameters match the configuration of the network controller.  
2. The network controller is not configured for this computer. In Windows 95 or Windows NT, select the Network icon at the Control Panel.  
3. Network controller interrupt with an expansion board. Under the Computer Setup Advanced menu, change the resource settings for the board. |

*continued*
**Network Problem**  
**Network controller stopped working when an expansion board was added to the computer.**

**Possible Solution**

1. Network drivers are not loaded or driver parameters do not match the current configuration. Make sure that the drivers are loaded and that the driver parameters match the configuration of the network controller.

2. The cable is not securely connected or is attached incorrectly. Ensure that the cable is securely attached to the network connector and that the other end of the cable is securely attached to the correct device.

3. Network controller interrupt with an expansion board. Under the Computer Setup Advanced menu, change the resource settings for the board.

4. Network drivers were accidentally deleted when the drivers for the new expansion board were installed, or the files containing the network drivers are corrupted. Reinstall the network drivers, using backup diskettes.

**Network controller stopped working without apparent cause.**

1. The files containing the network drivers are corrupted. Reinstall the network drivers, using backup diskettes.

2. The cable is not securely connected or is attached incorrectly. Ensure that the cable is securely attached to the network connector and that the other end of the cable is securely attached to the correct device.

3. The network controller is defective. Replace the network controller or system board.

**Cannot connect to the network server when attempting Remote System Installation.**

The network controller is not configured properly. Run Computer Setup and modify the Embedded NIC Settings.

**System Setup utility reports unprogrammed EPROM.**

1. Boot the workstation without the network drivers using a system boot diskette and reconfigure the controller.

2. Replace the controller.

3. Replace the system board.
Resolving Audio Hardware Conflicts

Hardware conflicts occur when two or more peripheral devices contend for the same signal lines or channels. Conflicts between the audio interface and another peripheral device may be due to the settings of the base I/O addresses, interrupts, or DMA channels. The audio interface typically has the following settings:

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Base I/O address</td>
<td>220H</td>
</tr>
<tr>
<td>FM Synthesizer I/O address</td>
<td>388-38Bh</td>
</tr>
<tr>
<td>Interrupt</td>
<td>IRQ 5</td>
</tr>
<tr>
<td>8-bit DMA</td>
<td>Channel 1</td>
</tr>
</tbody>
</table>

To resolve hardware conflicts:

1. Change the hardware settings of your audio card or the peripheral card in your system if the peripheral card is using the audio interface setting. You can change settings for integrated audio using Computer Setup.
2. If you are unsure of the settings of the peripheral cards, you can isolate the source of the problem by temporarily removing all cards and other essential cards such as the disk controller. After that, add the cards back one at a time until the card that is causing the conflict is found.

<table>

<th>Possible Solution</th>
</tr>
</thead>
</table>
| Sound does not come out of the speaker. | Software volume control is turned down in Microsoft Sound System Control Panel, or CD-ROM or DVD volume control on the front or back of the computer is turned down.  
  1. Click Start, then select Programs, Accessories, Multimedia, Volume Control.  
  2. Turn the CD-ROM volume control knob on the front or back of the computer to increase the volume.  |

Troubleshooting Using Compaq Intelligent Manageability Features

The Local Alert Pop-Up Dialog notifies you of an impending or actual hardware failure. If the computer is connected to a network and the Compaq Insight Management Agents are installed and configured, an Simple Network Management Protocol (SNMP) trap (message) is sent to the specified SNMP-compliant management application.

The Local Alert Pop-Up Dialog also tells you the steps you need to take prior to a hardware failure to avoid loss of data and damage to the computer. The system administrator can create a customized action message that might include contact telephone or pager numbers.

To close the Local Alert Pop-Up Dialog, click the Close button. To retrieve fault information after closing the dialog, run Compaq Insight Personal Edition.

For more detailed information, refer to the online Intelligent Manageability Guide.
Some Compaq computers have a complete series of POST error messages with code numbers assigned to them. Use the information below for those computers.

An error message results if the Power-On Self-Test (POST) encounters a problem. This test runs when the system is turned on, checking assemblies within the computer and reporting any errors found.

### POST Error Messages  
**Screen Message** | **Beeps**  | **Probable Cause** | **Recommended Action**
--- | --- | --- | ---
163-Time & Date Not Set | 2S | Invalid time or date in configuration memory.  
RTC (real-time clock) battery may need to be replaced. Battery life is approximately 3 years.  
CMOS jumper may not be properly installed. | Set the date and time under Control Panel.  
If the problem persists, replace the RTC battery.  
Check for proper placement of the CMOS jumper.

164-Memory Size Error | 2S | Memory configuration is incorrect. | 1. Run Computer Setup (F10 Setup) or Windows utilities.  
2. Make sure memory module(s) (if any) are installed properly.  
3. Verify proper memory module type.  
4. If third-party memory has been added, test using Compaq-only memory.

183-Invalid Processor Jumper Setting | 2S | System board jumper improperly set. | Reset system board jumpers to match processor and bus speeds.

201-Memory Error | None | RAM failure. | 1. Run computer Setup (F10 Setup) or Windows utilities.  
2. Ensure memory and continuity modules are installed correctly.  
3. Verify proper memory module type.  
4. Remove and replace memory module(s) one at a time to isolate faulty module.  
5. Replace the faulty memory module(s).  
6. If error persists after replacing memory modules, replace the system board.

202-Memory Type Mismatch | None | Memory modules do not match each other. | Replace memory modules with matched sets.

207-ECC Corrected Single Bit Errors in DIMM/SIMM Pair(s) X,X,... in Memory Socket(s) y,y | 2S | Single Bit ECC error. | 1. Verify proper memory module type.  
2. Try another memory socket.  
3. Replace memory module if problem persists.

* L = Long, S = Short
### POST Error Messages  Continued

<table>
<thead>
<tr>
<th>Screen Message</th>
<th>Beeps*</th>
<th>Probable Cause</th>
<th>Recommended Action</th>
</tr>
</thead>
</table>
| 212-Failed Processor | None | Processor has failed to initialize. | 1. Reseat the processor in its socket.  
2. If the processor does not respond, replace it. |
| 213-Incompatible DIMM Module in DIMM Socket(s) X,X | 2S | A DIMM module in DIMM socket identified in the error message is missing critical SPD information, or is incompatible with the chipset. | 1. Verify proper memory module type.  
2. Try another memory socket.  
3. Replace DIMM with a module conforming to the SPD standard. |
| 214-Memory Device Failure. Error Code: XX Memory Module Socket(s):XX | None | A specific error has occurred in a RDRAM device installed in the identified socket. | 1. Verify proper memory module type.  
2. Try another memory socket.  
3. Replace memory module if problem persists. |
| 301-Keyboard Error | None | Keyboard failure. | 1. Reconnect keyboard with computer turned off.  
2. Check connector for bent or missing pins.  
3. Ensure that none of the keys are depressed.  
4. Replace keyboard. |
| 304-Keyboard or System Unit Error | None | Keyboard failure. | 1. Reconnect the keyboard with computer turned off.  
2. Ensure that none of the keys are depressed.  
3. Replace keyboard.  
4. Replace system board. |
| 401-Parallel Port 1 Address Assignment Conflict | 2S | IRQ address conflicts with another device. | Reset the IRQ. |
| 403-Parallel Port 3 Address Assignment Conflict | 2S | IRQ address conflicts with another device. | Reset the IRQ. |
| 404-Parallel Port Address Conflict Detected | 2S | Both external and internal ports are assigned to parallel port X. | 1. Remove any parallel expansion cards.  
2. Clear CMOS.  
3. Reconfigure card resources and/or run Computer Setup (F10 Setup). |

</tr>
</thead>
</table>
| 1793-Secondary Controller or Disk Failure | None | Hard drive circuitry error. | 1. Run Computer Setup (F10 Setup).  
2. Clear CMOS.  
3. Check cable seating/jumper settings.  
4. Run hard drive diagnostics.  
5. Disconnect additional drives.  
6. Run the Drive Protection System test if available.  
7. Replace the hard drive. |
| 1800-Temperature Alert | None | Internal temperature exceeds specification. | 1. Check that computer air vents are not blocked and cooling fan is running.  
2. Verify processor speed selection.  
3. Replace the processor.  
4. Replace the system board. |
| 1801 | None | Processor not supported by ROM Bios. | Upgrade Bios to proper version. |
| Audible | 1L, 3S | System ROM is bad; system is running in Failsafe Boot Block mode. | Reflash the ROM using a ROMPaq diskette. Refer to the “Failsafe Boot Block ROM” section of the Software Reference Guide. |
| Audible | 2S | Power-on successful. | None |
| Flashing Caps Lock LED on Keyboard | 1L, 2S | Graphics controller not present or incorrectly initialized. | 1. Clear CMOS.  
2. If graphics card has been added, remove and reseat. |
| Flashing Num Lock LED on Keyboard | 1S, 2L | System memory not present. | 1. Check memory module.  
2. Remove and reseat memory module.  
3. See “Memory Problems” in Appendix A. |
| Num Lock LED on Keyboard | None | Failed Boot Block. | Reflash the ROM using a ROMPaq diskette. |
| Flashing Scroll Lock LED on Keyboard | 2L, 1S | System board hardware failure (prior to video). | Replace system board. |

**POST ERROR MESSAGES - NOT NUMBERED**

Some Compaq computers have a complete series of POST error messages that no code numbers assigned to them. Use the information below for those computers.

An error message results if the Power-On Self-Test (POST) encounters a problem. This test runs when the system is turned on, checking assemblies within the computer and reporting any errors found. POST checks the following assemblies to ensure that the computer system is functioning properly:

- Keyboard
- System board
- Memory modules
- Video memory
- Diskette drives
- Hard drive
- Power supply

POST also detects the type of mass storage devices installed in the computer.

If POST finds an error in the system, an error condition is indicated by an audible and/or visual message. The following table gives explanations of the error codes and recommended courses of action.

❗ An external speaker must be installed into the speaker output connector to hear audible beeps during POST.
